

TAKK ANTI-STATIC FLEXCORD

Innovative, Stretchable Static Eliminating Cord

Quality:

Constructed of highly conductive Thunderon™ fibers, TAKK Anti-Static FlexCord utilizes thousands of conductive micro points to effectively eliminate static electricity.

Economy:

TAKK Anti-Static FlexCord does not require the use of power and the cord, itself, is extremely low in price. Thus offering you top results with true economy.

Design and Function:

Our Anti-Static FlexCord is strong, lightweight, and stretches to 100% its length allowing for precise positioning and avoiding snags with materials or objects that accidentally come in contact with the cord. Easy to install, easy to maintain, and has a long service life. It will not oxidize and become less conductive. The FlexCord is a self-energizing, induction type static eliminator which does not spark or cause sparks, and can be used in hazardous locations, even when flammable vapors are present.

Simple to Use:

Tiny microfibers provide thousands of conductive points which cause static electricity charges to ionize and flow to ground.

The FlexCord should be placed across the moving surface to be neutralized and grounded to bare metal on the machine. FlexCord can be placed on either side of the affected surface in contact with or near the surface. The higher the static level the more effective the FlexCord function.

How to Order:

#5683 – FlexCord 32.5 ft. (10 meters) roll

#5683-32MAG4 – 4 Magnet Mounting Kit includes one 32.5 ft. roll FlexCord and 4 magnets (for metal surface mounting)

#5683-32MAG6 – 6 Magnet Mounting Kit includes one 32.5 ft. roll FlexCord and 6 magnets (for metal surface mounting)

4 Magnet Mounting Kit

Applications:

Anti-Static FlexCord is effective in a wide variety of industrial applications including extruding, sheeting, slitting, winding, coating, printing, carding, slashing, warping, folding, paper, plastics, textiles, computers, and duplicators.

**INCREASE PRODUCTIVITY • RUN MACHINES AT OPTIMUM SPEEDS WITH LESS REJECTS
PREVENT DUST CONTAMINATION • ENHANCE PRODUCT QUALITY
PROTECT OPERATORS FROM SHOCK**
